THE BRAWN AND POWER OF THE 2000 AT AN **EZ-IER** TO HANDLE PRICE!

The EZ-Screen 1500 is a product of Argus Industrial Co., manufacturer of the EZ-Screen range of screening plants -- all offering innovation, productivity, versatility and value through patented designs, exclusive features, quality manufacturing and outstanding customer service.

The EZ-Screen 1500 looks a lot like the EZ-Screen 2000. Same size screening area. Same quality craftsmanship. And it has the same site-to-site EZ mobility. While it doesn't have the 2000 conveyor system, it's still uniquely engineered to help maximize productivity and cut cycle times.

Match mated to 1-3 yard loaders, the 1500 is designed to let you load material into the 6' x 7'7" double deck screen box, then in the same cycle lower the bucket to remove the fines.

Result: you don't have to be caught with an empty bucket. Cycle times are decreased, productivity increased.

The EZ-Screen 1500 is equipped with a patented non-hydraulic screen drive. Custom-order it to fit your operation: with grizzly bars, punch plates, end-tensioned woven wire or piano wire screens on the bottom deck.

Set up on the 1500 is as EZ as one man with a finger. On site, push button electric/hydraulics pull up the wheels, and the unit's ready for operation.

To move to the next location, the system lowers the wheels and brings the tow bar level with the hitch on your truck.

The EZ-Screen 1500.

"EZ to own. EZ to operate. Put it to work and see how EZ it turns dirt into money."
